Handling SQS messages and processing the image

The SQS message to trigger the image processing is handled by the worker. Once a message is received, the worker starts to download the raw image from S3, applies the sepia filter, and uploads the processed image back to S3. After that, the process state in DynamoDB is modified. Figure 16.15 shows the steps.

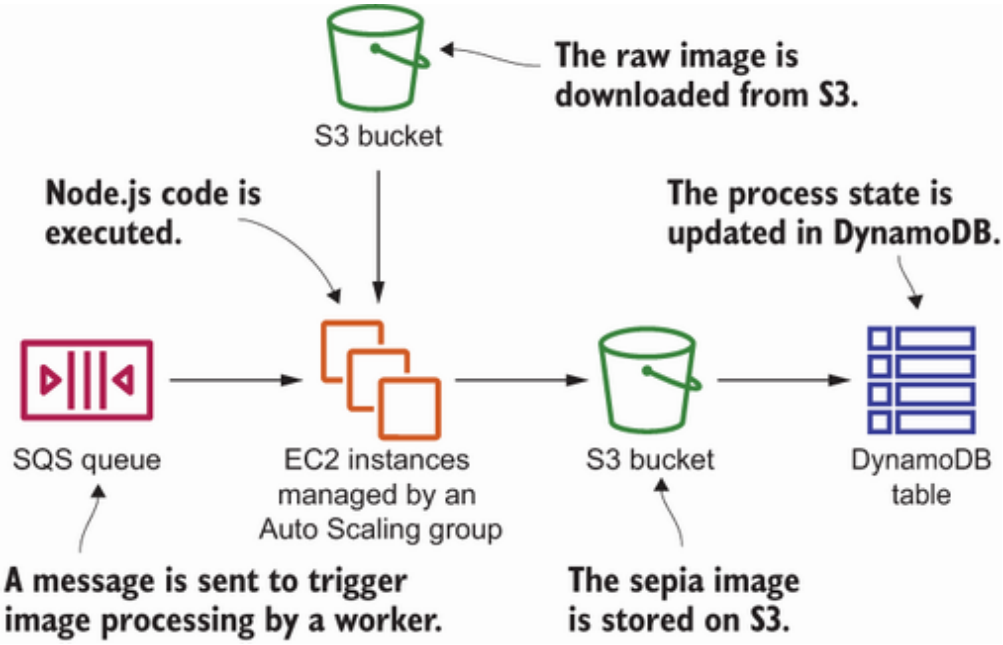

Figure 16.15 Processing a raw image to upload a sepia image to S3

The code to process an image appears next.

Listing 16.6 Imagery worker: Handling SQS messages (worker/worker.js)

```
async function processImage(image) {
  let processedS3Key = 'processed/' + image.id + '-' + Date.now() + '.png';
  let rawFile = './tmp_raw_' + image.id;
  let processedFile = './tmp_processed_' + image.id;
```
