instances are up and running and replaces instances that fail the load balancer's health check.

The following listing shows how to create the load balancer with the help of CloudFormation.

Listing 16.9 CloudFormation template: Load balancer for the Imagery server

```
LoadBalancer:                                          ①
  Type: 'AWS::ElasticLoadBalancingV2::LoadBalancer'
  Properties:
    Subnets:
    - Ref: SubnetA
    - Ref: SubnetB
    SecurityGroups:
    - !Ref LoadBalancerSecurityGroup
    Scheme: 'internet-facing'
  DependsOn: VPCGatewayAttachment
LoadBalancerListener:                                  ②
  Type: 'AWS::ElasticLoadBalancingV2::Listener'
  Properties:
    DefaultActions:
    - Type: forward                                    ③
      TargetGroupArn: !Ref LoadBalancerTargetGroup
    LoadBalancerArn: !Ref LoadBalancer
    Port: 80                                           ④
    Protocol: HTTP
LoadBalancerTargetGroup:                               ⑤
  Type: 'AWS::ElasticLoadBalancingV2::TargetGroup'
  Properties:
    HealthCheckIntervalSeconds: 5                      ⑥
    HealthCheckPath: '/'
    HealthCheckPort: 8080
    HealthCheckProtocol: HTTP
    HealthCheckTimeoutSeconds: 3
    HealthyThresholdCount: 2
    UnhealthyThresholdCount: 2
    Matcher:
      HttpCode: '200,302'
    Port: 8080                                         ⑦
    Protocol: HTTP
    VpcId: !Ref VPC
LoadBalancerSecurityGroup:                             ⑧
```
