The following listing shows a one-time scheduled action increasing the number of web servers at 12:00 UTC on January 1, 2018. As usual, you'll find the code in the book's code repository on GitHub: https://github.com/AWSinAction/code3. The CloudFormation template for the WordPress example is located in /chapter17/wordpress-schedule.yaml.

Listing 17.2 Scheduling a one-time scaling action

```
OneTimeScheduledActionUp:
  Type: 'AWS::AutoScaling::ScheduledAction'          ①
  Properties:
    AutoScalingGroupName: !Ref AutoScalingGroup      ②
    DesiredCapacity: 4                               ③
    StartTime: '2025-01-01T12:00:00Z'                ④
```

① Defining a scheduled action

② Name of the Auto Scaling group

③ Sets the desired capacity to 4

④ Changes the setting at 12:00 UTC on January 1, 2025

You can also schedule recurring scaling actions using cron syntax. The code example shown next illustrates how to use two scheduled actions to increase the desired capacity during business hours (08:00 to 20:00 UTC) every day.

Listing 17.3 Scheduling a recurring scaling action that runs at 20:00 UTC every day

```
RecurringScheduledActionUp:
  Type: 'AWS::AutoScaling::ScheduledAction'          ①
  Properties:
    AutoScalingGroupName: !Ref AutoScalingGroup
    DesiredCapacity: 4                               ②
    Recurrence: '0 8 * * *'                          ③
 RecurringScheduledActionDown:
  Type: 'AWS::AutoScaling::ScheduledAction'
  Properties:
    AutoScalingGroupName: !Ref AutoScalingGroup
    DesiredCapacity: 2                               ④
    Recurrence: '0 20 * * *'                         ⑤
```

① Defining a scheduled action

② Sets the desired capacity to 4

③ Increases the capacity at 08:00 UTC every day

④ Sets the desired capacity to 2

⑤ Decreases the capacity at 20:00 UTC every day
