Table 18.2 Provisioning CPU and memory for Fargate

CPU	Memory
0.25 vCPU	0.5 GB, 1 GB, or 2 GB
0.5 vCPU	Minimum 1 GB, Maximum 4 GB, 1 GB increments
1 vCPU	Minimum 2 GB, Maximum 8 GB, 1 GB increments
2 vCPU	Minimum 4 GB, Maximum 16 GB, 1 GB increments
4 vCPU	Minimum 8 GB, Maximum 30 GB, 1 GB increments
8 vCPU	Minimum 16 GB, Maximum 60 GB, 4 GB increments
16 vCPU	Minimum 32 GB, Maximum 120 GB, 8 GB increments

Fargate is billed for every second a task is running, from downloading the container image until the task terminates. What does a Fargate task with 1 vCPU and 4 GB memory cost per month? It depends on the region and architecture (Linux/X86, Linux/ ARM, Windows/X86). Let's do the math for Linux/ARM in us-east-1:

- 1 vCPU: $0.04048 * 24 * 30 = $29.15 per month
- 4 GB memory: 4 * $0.004445 * 24 * 30 = $12.80 per month

In total, that's $41.95 per month for a Fargate task with 1 vCPU and 2 GB memory. See "AWS Fargate Pricing" at https://aws.amazon.com/fargate/pricing/ for more details.

When comparing the costs for CPU and memory, it is noticeable that EC2 is cheaper compared to Fargate. For example, a `m6g.medium` instance with 1 vCPU and 4 GB memory costs $27.72 per month. But when scaling EC2 instances for ECS yourself, fragmentation and overprovisioning will add up as well. Besides that, the additional complexity will consume working time. In our opinion, Fargate is worth it in most scenarios.
