```
      AwsvpcConfiguration:
        AssignPublicIp: 'ENABLED'
        SecurityGroups:
        - !Ref ServiceSecurityGroup
        Subnets: [!Ref SubnetA, !Ref SubnetB]
    PlatformVersion: '1.4.0'
    TaskDefinition: !Ref TaskDefinition
```

① A service belongs to a cluster.

② Runs tasks on Fargate. Alternatively, you could switch to FARGATE_SPOT to reduce costs, similar to EC2 Spot Instances, as discussed in chapter 3.

③ During a deployment, ECS is allowed to double the number of tasks.

④ During a deployment, ECS ensures that the number of running containers does not decrease.

⑤ By enabling the deployment circuit breaker, you ensure that ECS will not try forever to deploy a broken version.

⑥ ECS will run or stop tasks to make sure two tasks are up and running.

⑦ When a new task starts, ECS will wait for 30 seconds for the task to pass the health check. You need to increase this period for applications that start slowly.

⑧ The ECS service registers and unregisters tasks at the load balancer.

⑨ To be more precise, a specific container is registered at the load balancer.

⑩ The application is listening on port 3000.

The target group of the load balancer to register or deregister tasks

When deploying to a public subnet, assigning public IP addresses is required to ensure outbound connectivity.

Each tasks comes with its own ENI. The security group defined here is used to filter traffic.

A list of subnets in which to start tasks. You should use at least two different subnets and a desired count greater than two to achieve high availability.

From time to time, AWS releases a new Fargate plattform with additional features. We highly recommend specifying a platform version instead of using LATEST to avoid problems in production.

Being able to scale workloads is one of the superpowers of cloud computing. Of course, our container-based infrastructure should be able to scale out and scale in based on load as well. The next listing shows how to configure autoscaling. In the example, we are using a target-tracking scaling policy. The trick is that we need to define the
