

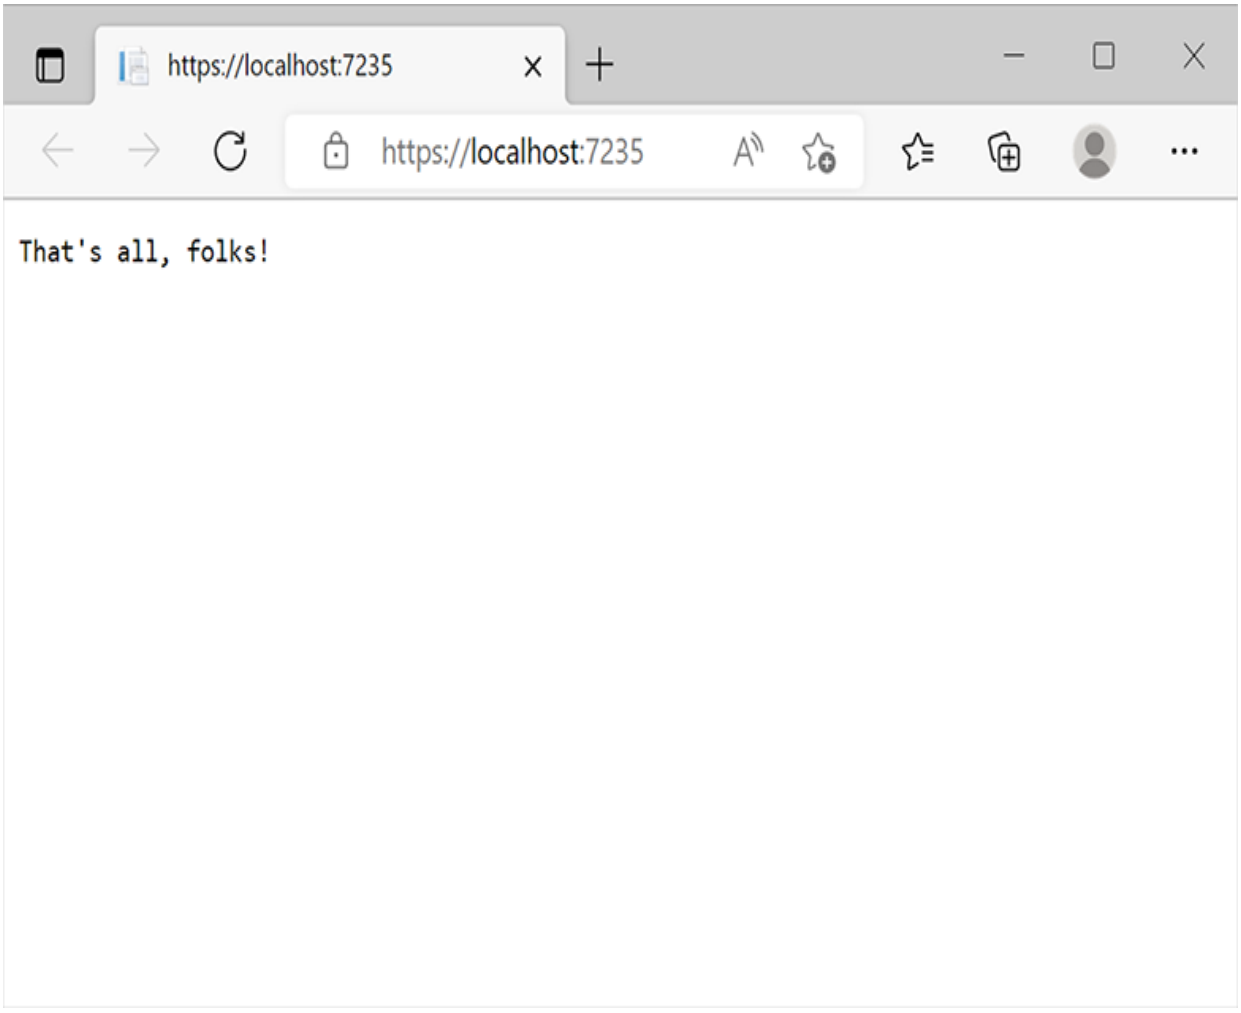

Figure 2.14 Shows output from the middleware

The next listing illustrates a middleware that conditionally passes processing on to the next middleware in the pipeline.

Listing 2.11 Middleware that conditionally passes control to the next middleware

```
async Task PassThroughMiddleware(HttpContext context, Func<Task> next)
{
    if (context.Request.Query.ContainsKey("stop"))
    {
        await context.Response.WriteAsync("Stop the world");
    }
    else
    {
```
