5.2 Model binding

Using model binding with handler parameters

Using model binding with public properties

Binding complex objects

Binding simple collections

Binding complex collections

5.3 Validating user input in Razor Pages

DataAnnotation attributes

Client-side validation

Server-side validation

Managing more complex validation with ModelState

Custom validation attributes

6 Working with forms: Tag helpers

6.1 The form and form action tag helpers

6.2 Input and label tag helpers

Understanding the input types

Using data annotation attributes to control presentation

Formatting the rendered date or time value

Using the DisplayAttribute to control labels

6.3 The select tag helper

Creating options

Binding multiple values

Working with OptGroups

Binding enumerations

6.4 Check boxes and radio controls

6.5 Uploading files

7 Using dependency injection to manage services

7.1 The reason for dependency injection

Single-responsibility principle

Loose coupling
