Custom email logger
Structured logging with Serilog

13 Protecting your application against external attacks

13.1 HTTPS

SSL/TLS certificates
Using HTTPS in development
Including HSTS in production

13.2 Broken access control

Incorrect security policies
Cross-site request forgery

13.3 Cryptographic failures

Plain-text passwords
Using the PasswordHasher without Identity UI

13.4 Injection attacks

SQL injection
Cross-site scripting

14 Configuring and publishing your application

14.1 Working with environments

Understanding and managing environments
Setting the environment
Registering services conditionally for each environment
The IHostEnvironment service
The environment tag helper

14.2 Application configuration

appSettings.json
Accessing configuration settings programmatically by key
Strongly typed app settings
Using the options pattern
Binding directly to POCOs
Environments
