❶ The OnPostSearch method has been altered to return PageResult.

❷ The Page() method acts as a wrapper around a call to new PageResult().

Generally, if your handler only ever results in the current page being processed and rendered, there is no need to explicitly return a `PageResult`. Table 3.1 shows the action result types you are most likely to work with in a Razor Pages application, along with their helper methods.

Table 3.1 Action results in Razor Pages

Action result class name	Helper method	Description
`PageResult`	`Page`	Renders the current Razor page.
`FileContentResult`	`File`	Returns a file from a byte array, stream, or virtual path.
`NotFoundResult`	`NotFound`	Returns an HTTP 404 status code indicating that the resource was not found.
`PartialResult`	`Partial`	Renders a partial view or page.
`RedirectToPageResult`	`RedirectToPage`, `RedirectToPagePermanent`	Redirects the user to the specified page. The `RedirectToPage` method returns an HTTP 302 status code, indicating that the redirect is temporary.
`StatusCodeResult`	`StatusCode`	Returns an HTTP response with the specified status code.

You should be as specific as possible when specifying the return type of your handler methods. There will be occasions when you need to return one of two or
