

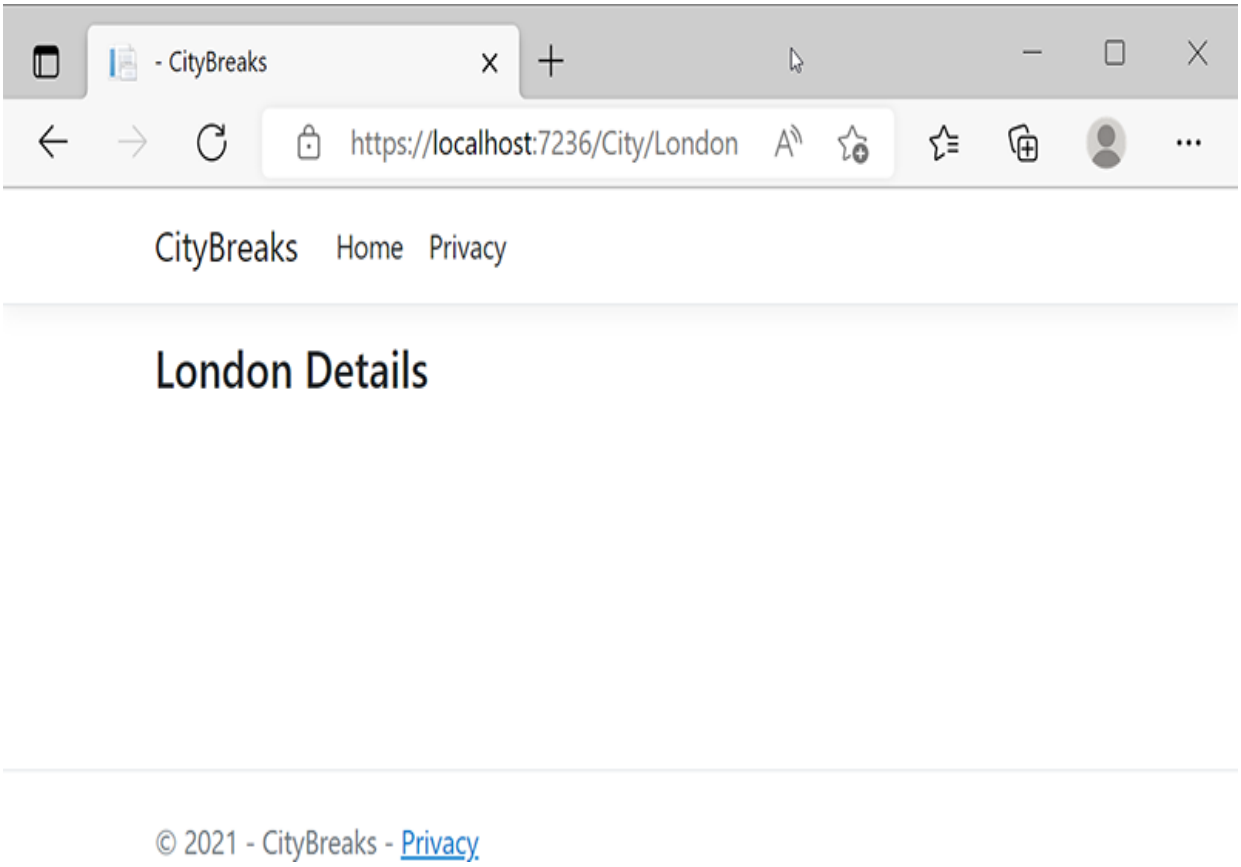

Figure 4.5 The parameter value is retrieved and displayed.

Parameters can be made optional by placing a question mark after the parameter name—for example, {cityName?}. Once the parameter has been made optional, you can navigate to the page without having to provide a value. Optional parameters can only be used as the last parameter in a route template. All other parameters must either be required or have a default value assigned to them.

Default values are assigned to route parameters in the same way they are assigned to normal C# method parameters, albeit without the quotes around string values:

```
"{cityName=Paris}"
```
