More likely, however, you would change the template altogether and constrain the incoming value to a `datetime` type:

```
"{cityName}/{arrivalDate:datetime}"
```

A wide range of constraints is available that restrict matching to specific data types and ranges. The most commonly used constraints are listed in table 4.5. The full range of constraints is available at https://github.com/dotnet/aspnetcore/tree/main/src/Http/Routing/src/Constraints.

Table 4.5 Constraints available in routing templates
