❷ Request.Form is replaced with Request.Query.

Run the page, and submit a value. Take a look at the browser address bar. You should notice that the submitted value appears in the URL as a query string value (figure 5.4).

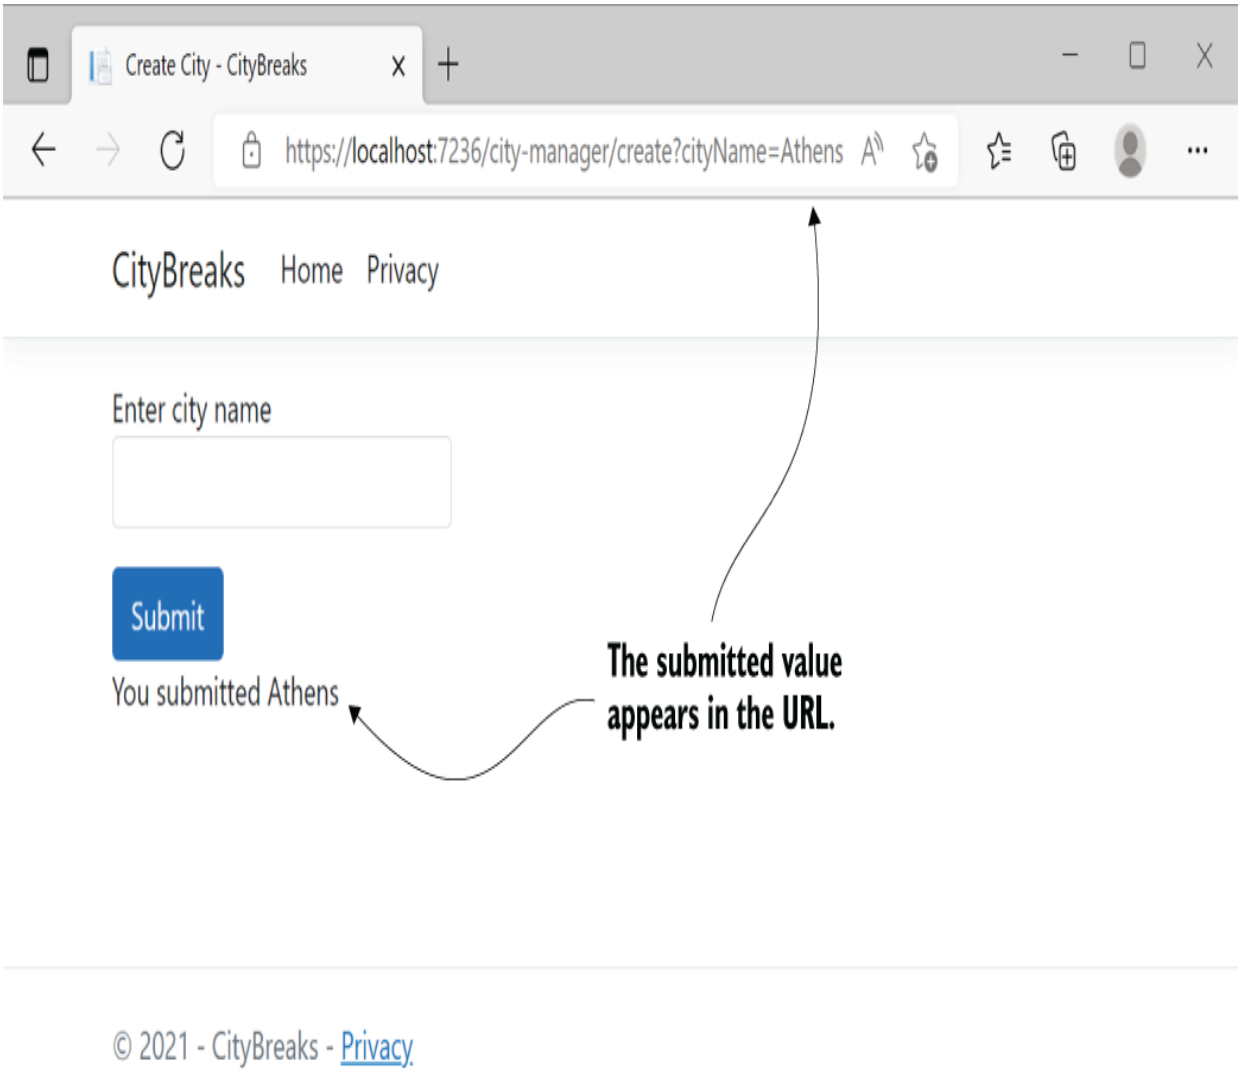

Figure 5.4 When using the GET method to submit a form, the form values are included in the URL as a query string.

If you copy the URL, including the query string, and browse to it, the application behaves as if the form was submitted again and processes the
