```
                <label for="Input.CountryCode"                          ❶
                ➥ class="control-label">ISO-3166-1 Code</label>        ❶
                <input name="Input.CountryCode"                         ❶
                ➥ class="form-control" />                              ❶
            </div>
            <div class="form-group">
                <input type="submit" value="Create" class="btn btn-primary" />
            </div>
        </form>
    </div>
</div>
@if(Model.Country != null){
    <p>You submitted @Model.Country.CountryName
    <img src="/images/flags/@(Model.Country.CountryCode).png" /></p>
}
```

❶ The pattern <property> .<property> has been used for the for and name attributes of the label and input elements.

Run the application, navigate to /country-manager/create, and enter a country name and a valid ISO-3166-1 code (e.g., `Ireland` and `ie`). You should see the name of the country and its flag rendered to the browser (figure 5.7).
