```
    <p>Number of cities selected: @Model.SelectedCities.Count()</p> ❸
    <ul>
    @foreach(var city in Model.Cities.Where(
    ➥ c => Model.SelectedCities.Contains(c.Id)))                    ❹
    {                                                                ❹
        <li>@city.Name</li>                                          ❹
    }                                                                ❹
    </ul>
}
```

❶ Loop through the collection of cities, and render a check box for each one.

❷ Check to see if there are any selected cities.

❸ Render the total number of elements in the collection.

❹ Render the name of each element.

When you run the page and select some cities, you should see the kind of output in figure 5.9.
