In this example, the data for the item with the `Id` of `826` is incorrect. The country should be named `United Kingdom`, and the alpha code should be `gb`. You will get a chance to edit that and see the result after you have created the form and submitted it. The following listing shows the code for the Razor page.

Listing 5.21 The edit form using an explicit index

```
<h4>Edit Countries</h4>

<div class="row">
    <div class="col-md-8">
        <form method="post">
            <table class="table table-borderless">
               <tr>
                    <th>Name</th>
                    <th>ISO-3166-1 Code</th>
               </tr>
               @foreach (var country in Model.Inputs)          ❶
               {
                    <input type="hidden" name="Inputs.Index"
                    ➥ value="@country.Id" />                  ❷
                    <tr>
                        <td class="w-75">
                        <input name="Inputs[@country.Id].      ❸
                        ➥ CountryName"                        ❸
                            value="@country.CountryName"
                            class="form-control" />
                    </td>
                        <td class="w-25">
                        <input name="Inputs[@country.Id].      ❸
                        ➥ CountryCode"                        ❸
                            value="@country.CountryCode"
                            class="form-control" />
                    </td>
                    </tr>
                }
            </table>
            <div class="form-group">
               <input type="submit" value="Update" class="btn btn-primary" />
            </div>
        </form>
    </div>
