

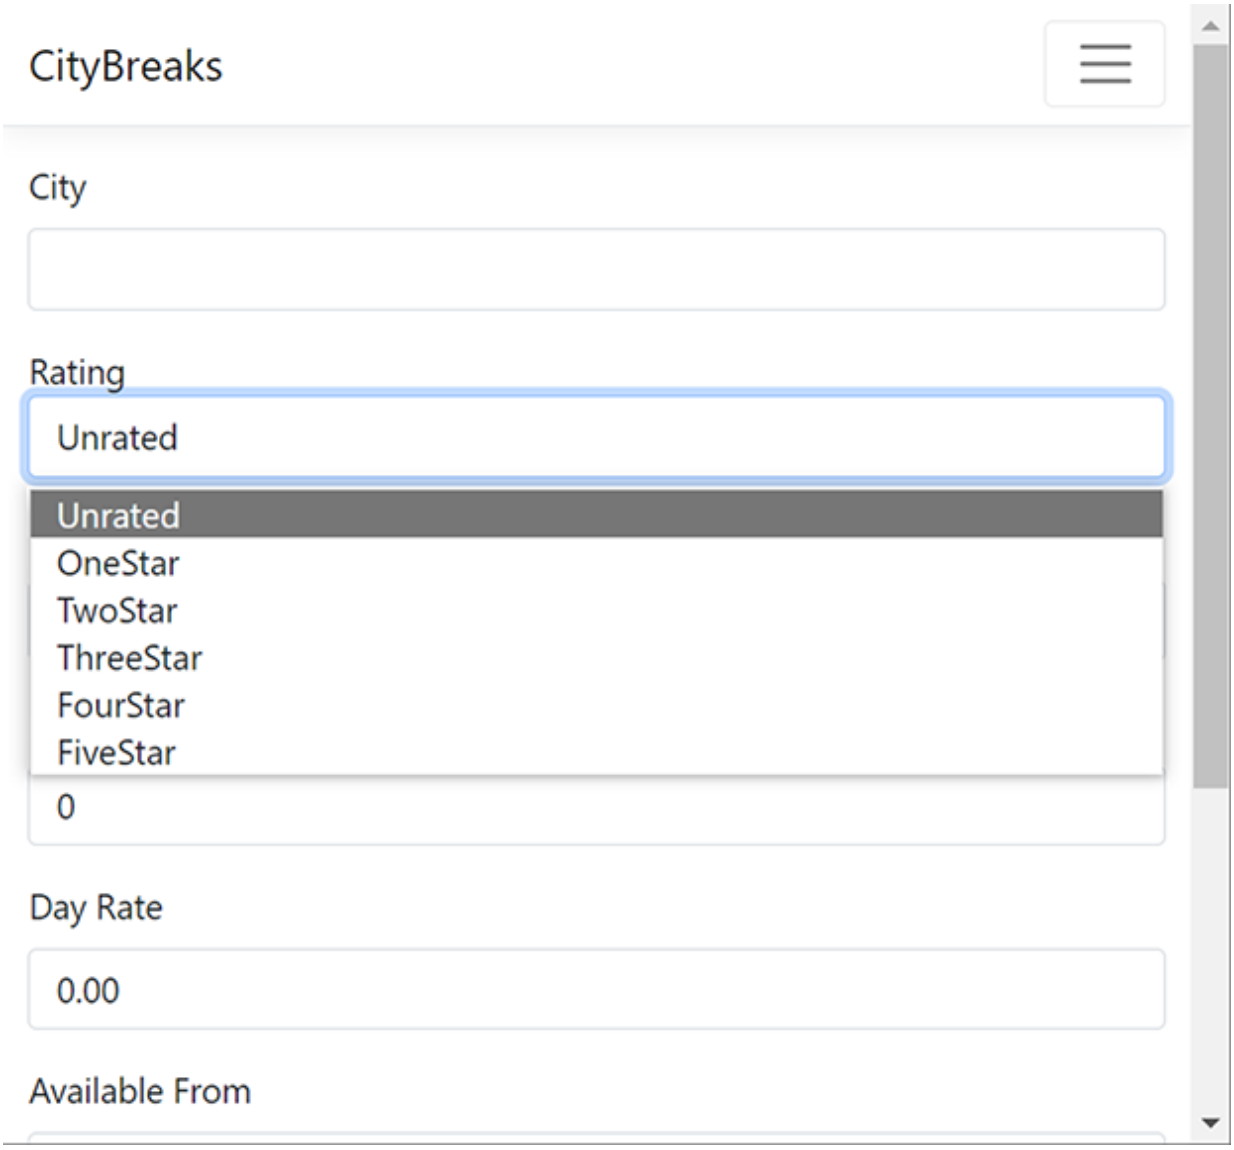

Figure 6.13 Enumeration bound to select list by the `Html.GetEnumSelectList` method

In this example, the Unrated option is selected. You can check the source code for the page to confirm that fact. This is because its option value (zero) is the default for `Rating`. If you don't want the value to be preselected, you can make the `PageModel` property nullable:

```
[BindProperty]
public Rating? Rating { get; set; }
```
