```
using CityBreaks.ValidationAttributes;
using Microsoft.AspNetCore.Mvc;
using Microsoft.AspNetCore.Mvc.RazorPages;
using System.ComponentModel.DataAnnotations;
```

Then change the content of the `CreateModel` class itself.

Listing 6.26 City `CreateModel` class

```
public class CreateModel : PageModel
{
    private readonly IWebHostEnvironment _environment;                ❶
    public CreateModel(IWebHostEnvironment environment)               ❶
    {                                                                 ❶
        _environment = environment;                                   ❶
    }                                                                 ❶

    [BindProperty]                                                    ❷
    [Required]                                                        ❷
    public string Name { get; set; }                                  ❷
    [BindProperty]                                                    ❷
    [Required]                                                        ❷
    [UploadFileExtensions(Extensions = ".jpg")]                       ❷
    public IFormFile Upload { get; set; }                             ❷
    [TempData]                                                        ❸
    public string Photo { get; set; }                                 ❸

    public async Task<IActionResult> OnPostAsync()
    {
        if (ModelState.IsValid)
        {
            TempData["Name"] = Name;                                  ❹
            Photo = $"{Name.ToLower().Replace(" ", "-")}               ❺
            ➥ {Path.GetExtension(Upload.FileName)}";                 ❺
            var filePath = Path.Combine(                              ❺
            ➥ _environment.WebRootPath, "images", "cities", Photo);  ❺
            using var stream = System.IO.File.                        ❺
            ➥ Create(filePath);                                      ❺
            await Upload.CopyToAsync(stream);                         ❺
            return RedirectToPage(                                    ❻
            ➥ "/CityManager/Index");                                 ❻
        }
        return Page();
```
