```
<h4>Create City</h4>

<div class="row">
    <div class="col-md-4">
        <form method="post" enctype="multipart/form-data">
            <div class="form-group">
                <label asp-for="Name" class="control-label"></label>
                <input asp-for="Name" class="form-control" />
                <span asp-validation-for="Name" class="text-danger"></span>
            </div>
            <div class="form-group">
                <label asp-for="Upload" class="control-label"></label><br />
                <input asp-for="Upload" accept=".jpg" />
                <span asp-validation-for="Upload" class="text-danger"></span>
            </div>
            <div class="form-group">
                <input type="submit" value="Create" class="btn btn-primary" />
            </div>
        </form>
    </div>
</div>
@section scripts{
    <partial name="_ValidationScriptsPartial"/>
}
```

Now you will add the page that a successful form submission redirects to. Add a new Razor page to the CityManager folder named Index.cshtml, and change the page content to the following.

Listing 6.28 Confirmation of the image upload

```
@page
@model CityBreaks.Pages.CityManager.IndexModel
@{
}
@if(TempData["Name"] != null){
    <div class="col-6">
        <h3>@TempData["Name"]</h3>
        <img src="/images/cities/@TempData["Photo"]" class="img-fluid"
alt="@TempData["Name"]"/>
    </div>
}
```

Again, there is nothing new here. You check that `TempData` contains something and then render the values to the browser. You then assign the
