image filename to part of the `src` of an `img` element, and you use the Bootstrap `img-fluid` CSS class to make the image responsive to fit its container.

Run the application, navigate to /city-manager/create, and enter a city name. Find an image for that city (I used Unsplash—https://unsplash.com/—for images that are free for commercial and noncommercial use), and upload that too. If all is correct, you should see the city's name and image rendered to the browser as well as the image saved to the Images\cities folder (figure 6.16).

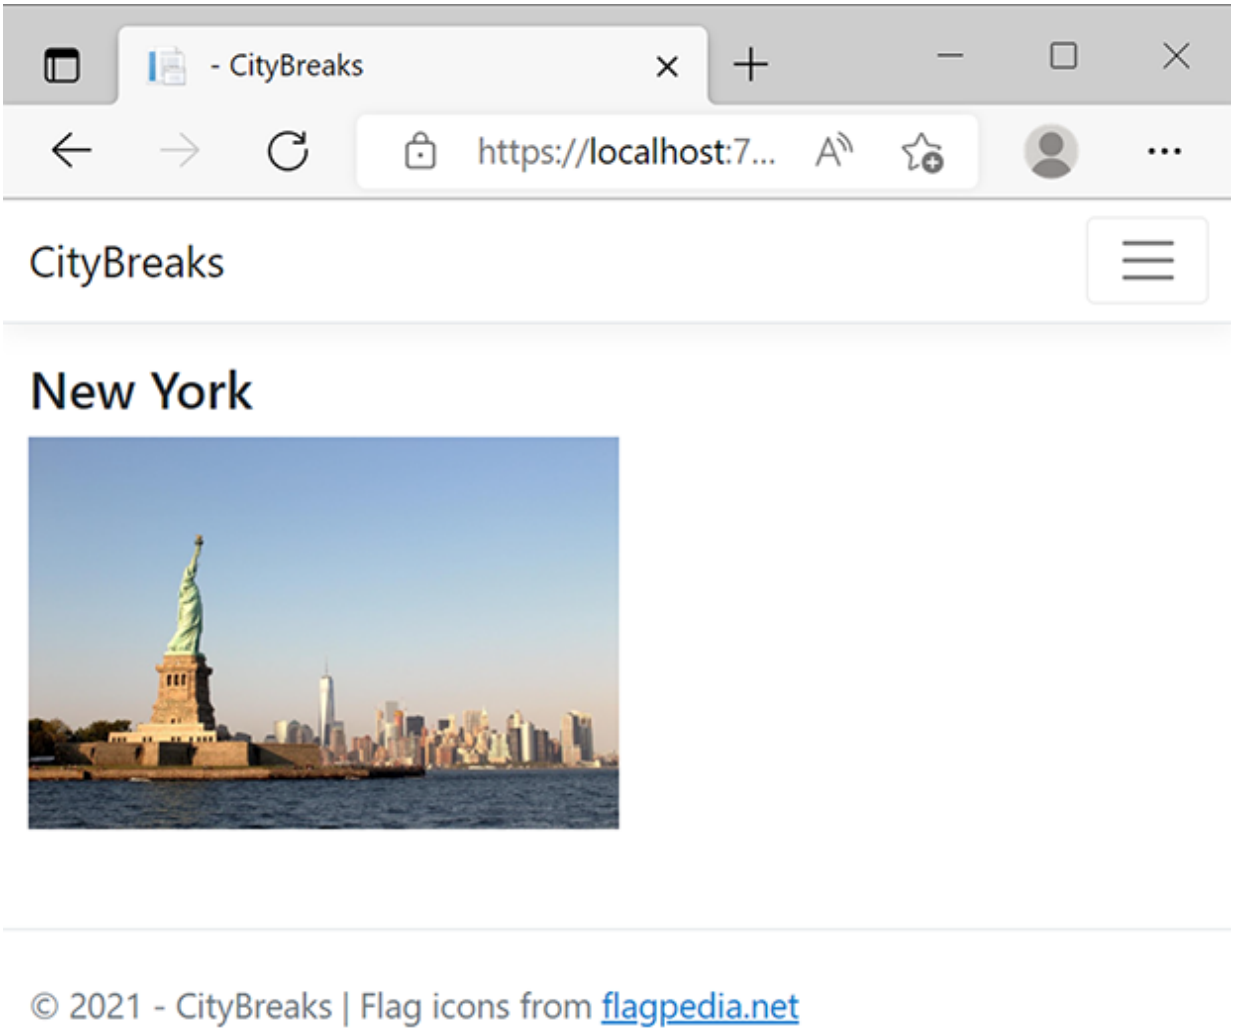

Figure 6.16 The uploaded image file rendered to the browser
