

The Extract Interface dialog

Now you need to ensure that the low-level component depends on the abstraction. Change `SimpleCityService,` so it implements the following interface:

```
public class SimpleCityService : ICityService
```

Note that this step is not necessary if you used the Visual Studio wizard to extract the interface.

The final step is to get the high-level module, the `CreateModel` class, to also depend on the abstraction. How do you do that? Drum roll, please ...
