Listing 8.16 Updated Razor code for the home page

```
<h1>City Breaks</h1>
<div class="container">
    <div class="row">

        @foreach (var city in Model.Cities)                                    ❶
        {
            <div class="col-4 p-3" style="text-shadow: rgb(0, 0, 0) 1px 1px
             ➥ 1px">
                <div class="card p-3 shadow"                                   ❷
                ➥ style="background:url(/images/cities/@city.Photo)           ❷
                ➥ no-repeat center;background-size: cover;height:240px;">      ❷
                    <h3>
                        <a class="text-white text-decoration-none"             ❸
                        ➥ asp-page="/City" asp-route-name="@city.Name">        ❸
                        ➥ @city.Name</a>                                      ❸
                       <img                                                    ❹
                       ➥ src="/images/flags/@(city.Country.CountryCode).png"  ❹
                       ➥ aria-label="@($"{city.Name},                          ❹
                       ➥ {city.Country.CountryName}")">                        ❹
                    </h3>
                    <h6 class="text-white">                                    ❺
                     ➥ @city.Properties.Count()properties</h6>                 ❺
                </div>
            </div>
        }
    </div>
</div>
```

❶ Loop through all of the cities.

❷ Use the Photo property of each city to set a background image.

❸ Output the name of the city.

❹ Reference the city's Country property and use its CountryCode to render the appropriate flag icon.

❺ Use the Count() method to render the total number of properties associated with each city.

Now you just need to replace the existing `SimpleCityService` registration in Program.cs with one that specifies the new `CityService` as the implementation to use for `ICityService`:

```
builder.Services.AddScoped<ICityService, CityService>();
```
