Figure 8.14 The original scaffolded Index page

Remember, this is the unmodified scaffolded version, so it displays the key values in the City column, not the Name column. The key values are also displayed in the select list on the Create page, which you can reach by clicking the Create New link just below the page heading. They are also displayed on the Details page for each property. Click the Edit link of one of the properties to see how it differs from the scaffolded Create page. The names of the cities appear in the select list, and the form labels are user friendly (figure 8.15).
