```
[Powershell]
add-migration CustomizeIdentityUser
[CLI]
dotnet ef migrations add CustomizeIdentityUser
```

Once you have applied the migration (`update-database` or `dotnet ef database update`), you can check the schema of the `AspNetUsers` table to confirm the new columns have been added successfully, as shown in figure 9.8.

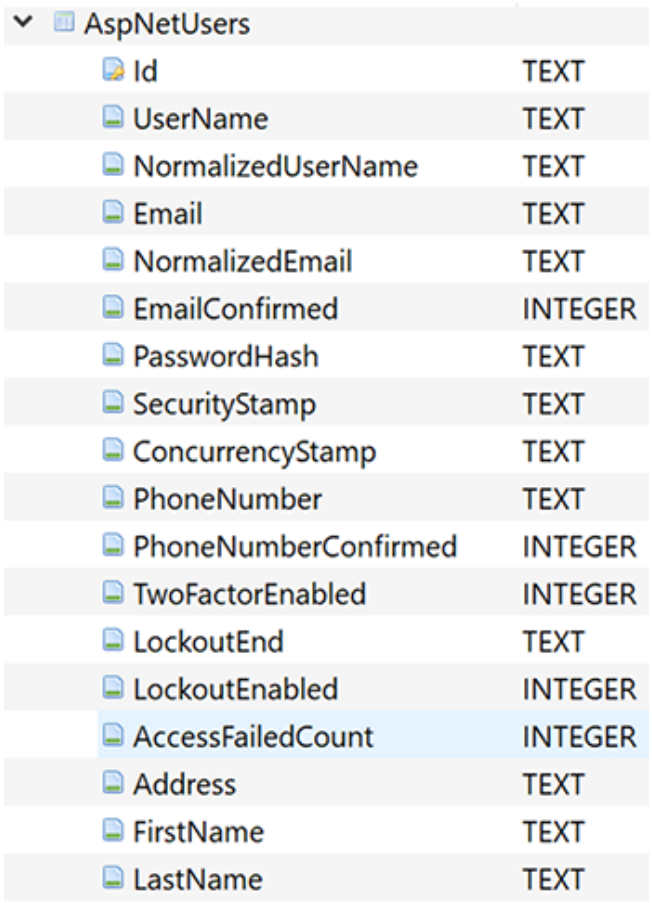

Figure 9.8 The amended `AspNetUser` table following the migration

Now that you can accommodate additional user data, you need to capture it at registration. So in the next section, you will see how that is done.

9.3.3 Scaffolding and customizing the UI
