```
<div class="col-md-6 col-md-offset-2">
    <section>
        <h3>Use another service to log in.</h3>
```

Comment the entire `div` out, or eradicate it. Then run the application. This time, the login page should appear without the content that previously occupied the right-hand side of the page (figure 9.13). Next you will change the Registration page to remove the same content about external logins and capture the additional information you added to the user class.

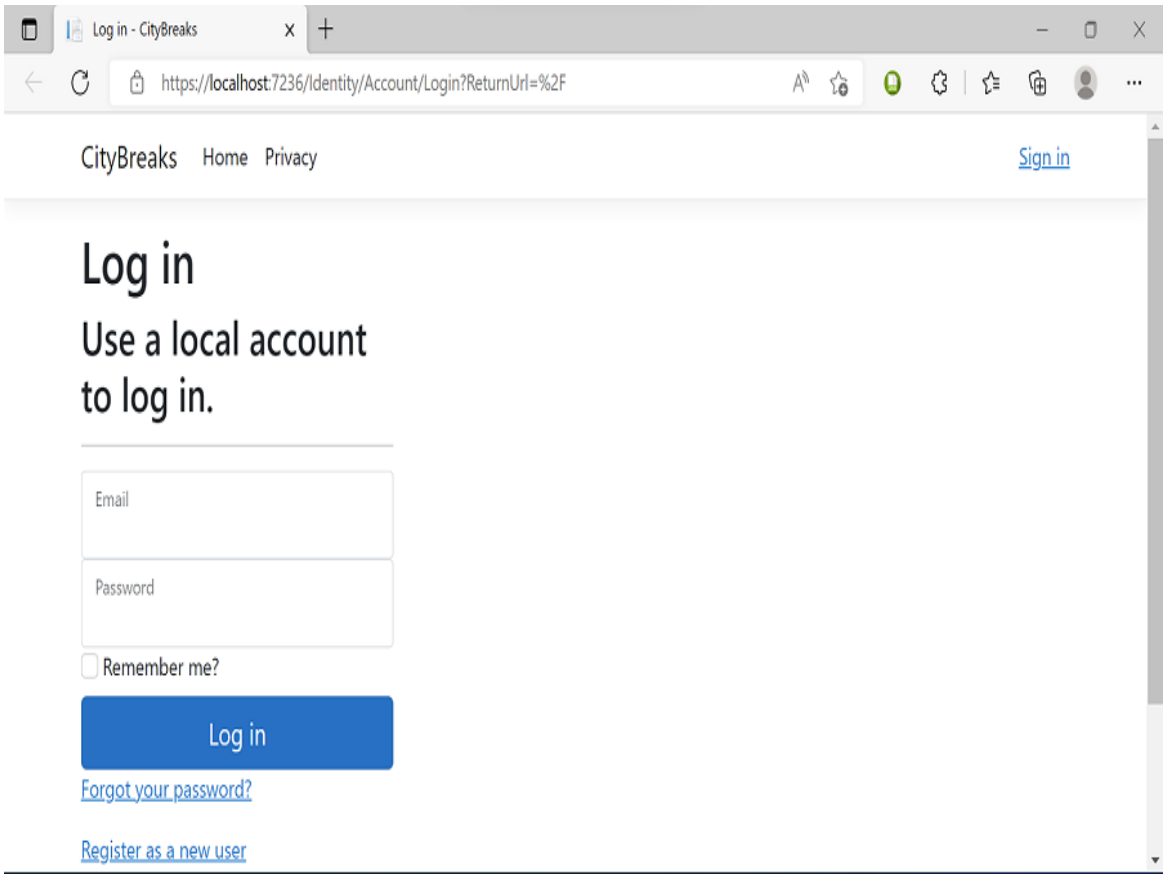

Figure 9.13 The modified Login page

AMENDING THE REGISTRATION PAGE

The `RegisterModel` class, located in Areas\Identity\Pages\Account\Register.cshtml.cs, uses the input model pattern to
