Listing 10.10 The `CreateModel` for the RolesManager

```
using Microsoft.AspNetCore.Identity;
using Microsoft.AspNetCore.Mvc;
using Microsoft.AspNetCore.Mvc.RazorPages;

namespace CityBreaks.Pages.RolesManager
{
    public class CreateModel : PageModel
    {
        private readonly RoleManager<IdentityRole> _roleManager;
        public CreateModel(RoleManager<IdentityRole> roleManager)
        {
            _roleManager = roleManager;
        }

        [BindProperty]
        public string Name { get; set; }
        public async Task<IActionResult> OnPostAsync()
        {
            if (ModelState.IsValid)
            {
                var role = new IdentityRole { Name = Name };
                await _roleManager.CreateAsync(role);
                return RedirectToPage("/RolesManager/Index");
            }
            return Page();
        }
    }
}
```

Next you add a form to the Razor page itself.

Listing 10.11 The Create Role form

```
@page
@model CityBreaks.Pages.RolesManager.CreateModel
@{
    ViewData["Title"] = "Create Role";
}
<h4>Create Role</h4>

<div class="row">
    <div class="col-md-8">
        <form method="post">
              <div class="form-group mb-3">
                <label asp-for="Name" class="control-label"></label>
                <input asp-for="Name" class="form-control" />
                <span asp-validation-for="Name" class="text-danger"></span>
            </div>
```
