```
                    context.Succeed(requirement);                    ❸
                }                                                    ❸
            }                                                        ❸
            if(requirement.Name == PropertyOperations.Delete.Name)     ❺
            {                                                        ❺
                if (context.User.IsInRole("Admin"))                  ❺
                {                                                    ❺
                    context.Succeed(requirement);                    ❺
                }                                                    ❺
            }                                                        ❺
            return Task.CompletedTask;
        }
    }
}
```

❶ TRequirement is OperationAuthorizationRequirement, and TResource is Property.

❷ The HandleRequirementAsync method takes both the requirement and the resource as well as the Authorization-HandlerContext.

❸ Access the resource's CreatorId property and check its value against the current user's Id. If they match, the requirement is successful.

❹ Check the current requirement's Name property. If it is the same as the Edit requirement's name, you process the authorization check.

❺ If the requirement is the Delete requirement, you check whether the current user is an Admin.

At this stage, you have a choice. You can either register formal policies for your requirements like you did previously, or you can choose to evaluate against the requirement directly. Since the latter involves less work, take that option.

The `Edit` authorization check will take place in the property manager Edit page's `OnGetAsync` handler, after the property to be edited has been retrieved from the database. You will use the `IAuthorizationService` directly to perform the check. It has an `AuthorizeUserAsync` method that takes a user, a resource, and a requirement as arguments and returns an `AuthorizationResult` object that has a Boolean `Succeeded` property. You will pass in the
