

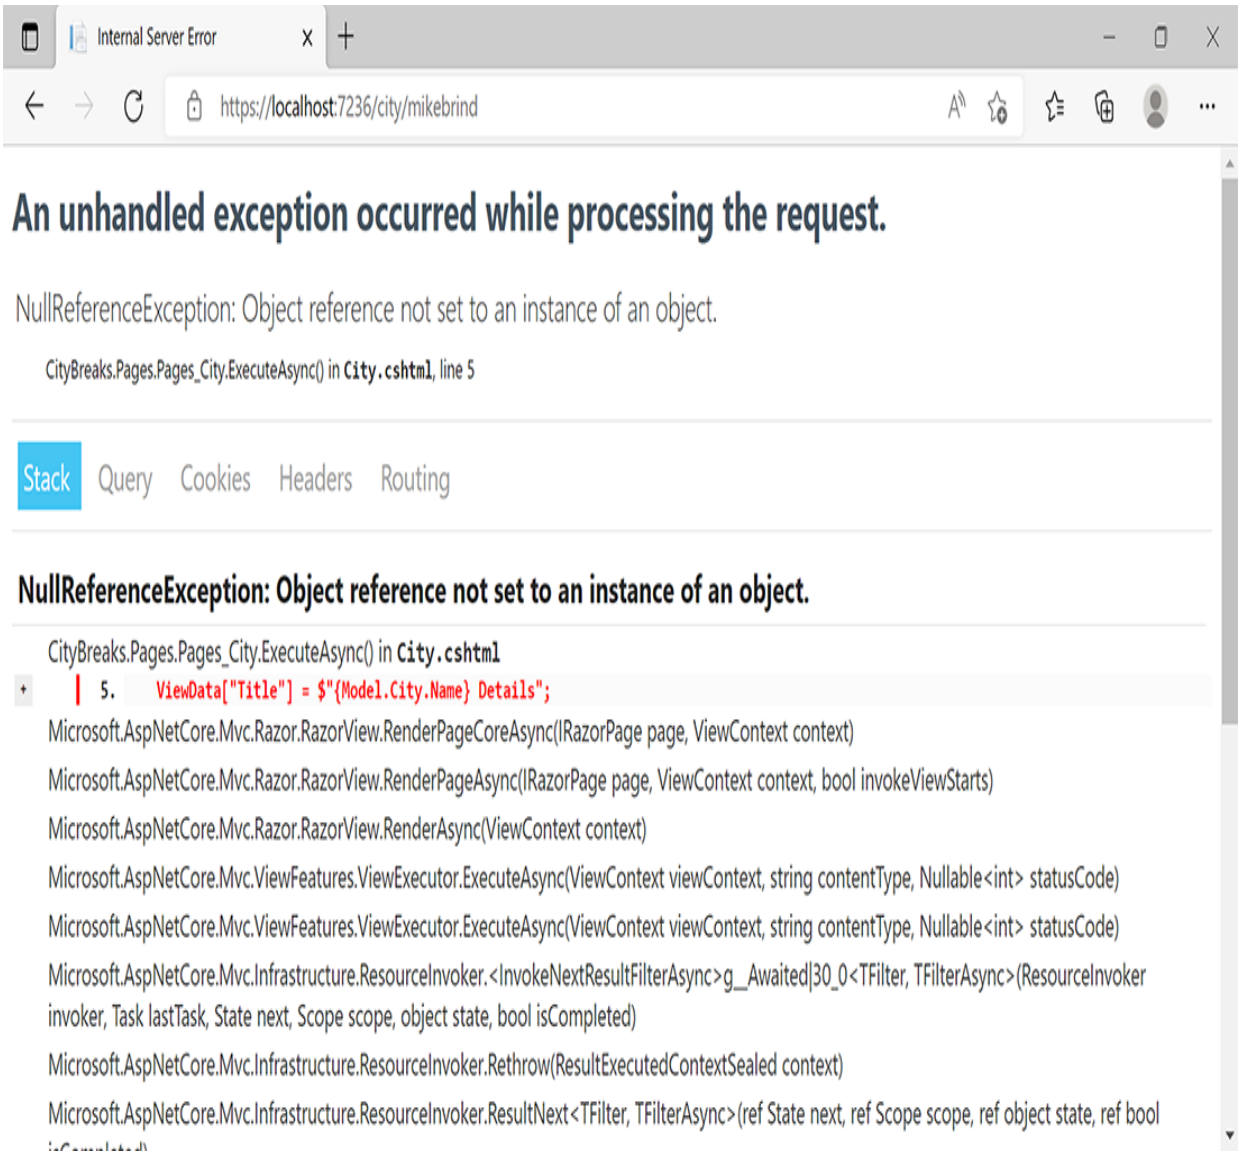

Figure 12.1 The Developer Exception page with tabs showing the stack trace and request details, including the query string, cookies, headers, and routing

There is no `City` named `mikebrind`, so when the page tries to access a property of the `Model.City` variable, you get a `NullReferenceException` because the value returned from the city service, which is assigned to the `City` property of the `PageModel`, is `null`. The error page shows all of this in detail. On the second line, it
