selecting the very similarly named ASP.NET Core Web API template. The correct template carries the following description: “A project template for creating an ASP.NET Core application with example, ASP.NET Razor Pages content.”

Once you have chosen a suitable location for your application files and moved to the next screen, ensure that your Target Framework selection is .NET 6, leaving all other options at their defaults. Authentication Type should be set to None, Configure for HTTPS should be checked, and you should leave the Enable Docker option unchecked (figure 2.1). Once you are happy with the selections, click the Create button. At this point, Visual Studio should open, showing your new application in Solution Explorer (figure 2.2).
