Figure 12.10 Logs (on the right) are output to the terminal window in VS Code.

Have a look at the structure of an individual log. It is composed of four elements:

- Level
- Category
- Event ID
- Message

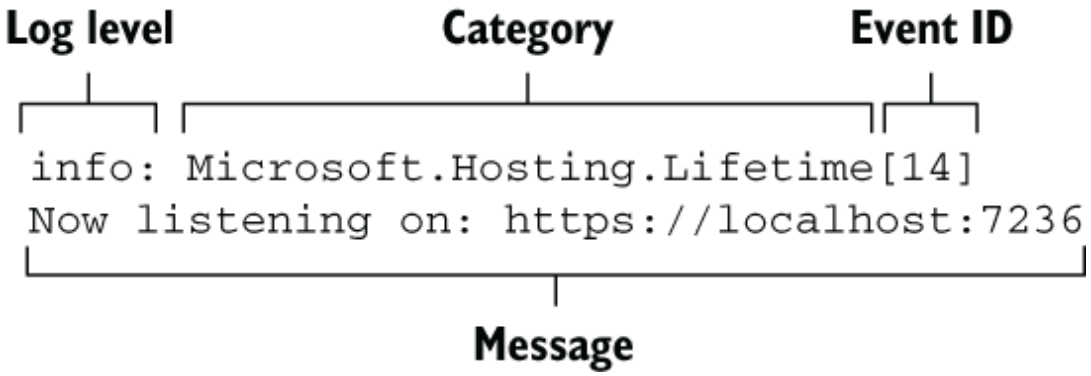

Figure 12.11 The log output comprises a level, category, event ID, and message.

In the next few sections, we will explore each of these elements in more detail.

12.3.2 Log levels

Log levels are used to convey the severity of the event that caused a log to be written. Table 12.2 lists the log levels used by .NET Core logging in order of severity, ranging from least severe to most severe.
