

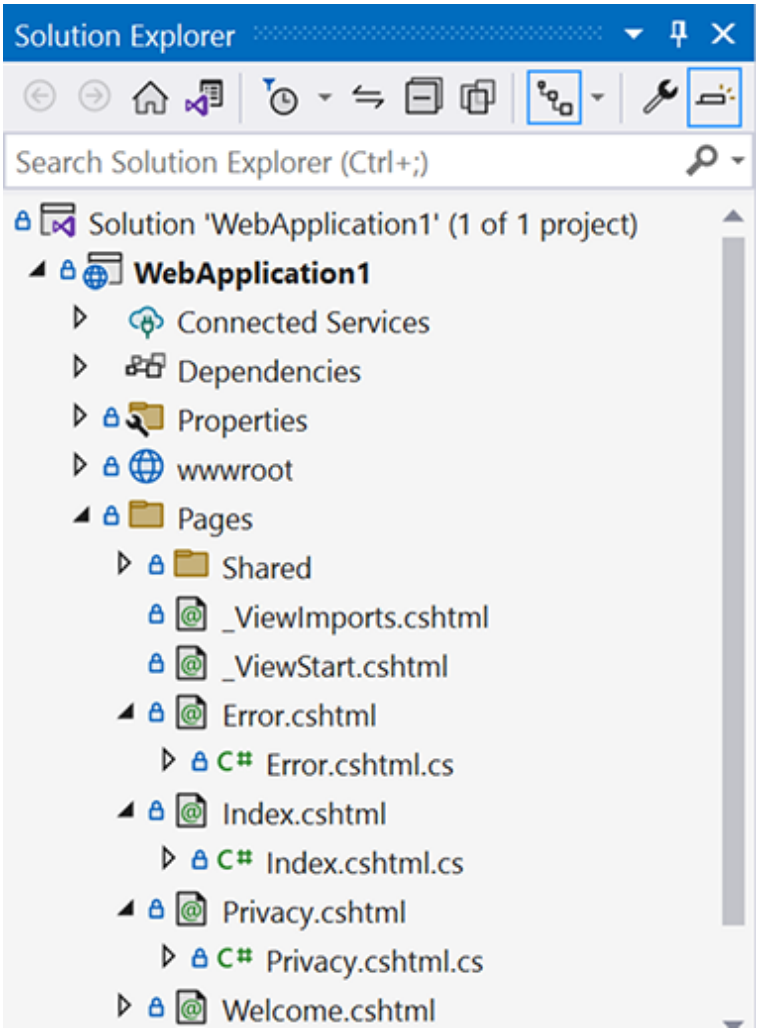

Figure 2.10 Solution Explorer automatically nests related files. You can toggle file nesting using the menu command.

The top-level file (the .cshtml file) is the Razor page file. It is also referred to as the *content* page file or the *view* file. For consistency, I'll refer to it as the Razor page (singular, with a lowercase *p* to differentiate from the Razor Pages framework) going forward. As you saw in the previous section, this file acts as the view template, containing Razor syntax, which is a mixture of C# and HTML—hence, the file extensions cs plus html. The second file is a C# code file containing a class that derives from `PageModel`. This class
