To create the template using Visual Studio, you must be using the 2022 version or later and have the .NET 7 software development kit (SDK) installed. Follow these steps:

1. Choose **File** > **New** > **Project** or choose **Create a New Project** on the splash screen.
2. From the list of templates, choose **ASP.NET Core Web Application**, ensuring that you select the C# language template.
3. On the next screen, enter a project name, location, and a solution name, and choose **Create**.
