By the end of this section, you'll have an application with a registration page, a login screen, and a manage account screen, like the default templates. You'll also have a persistent widget in the top right of the screen showing the login status of the current user, as shown in figure 23.11.

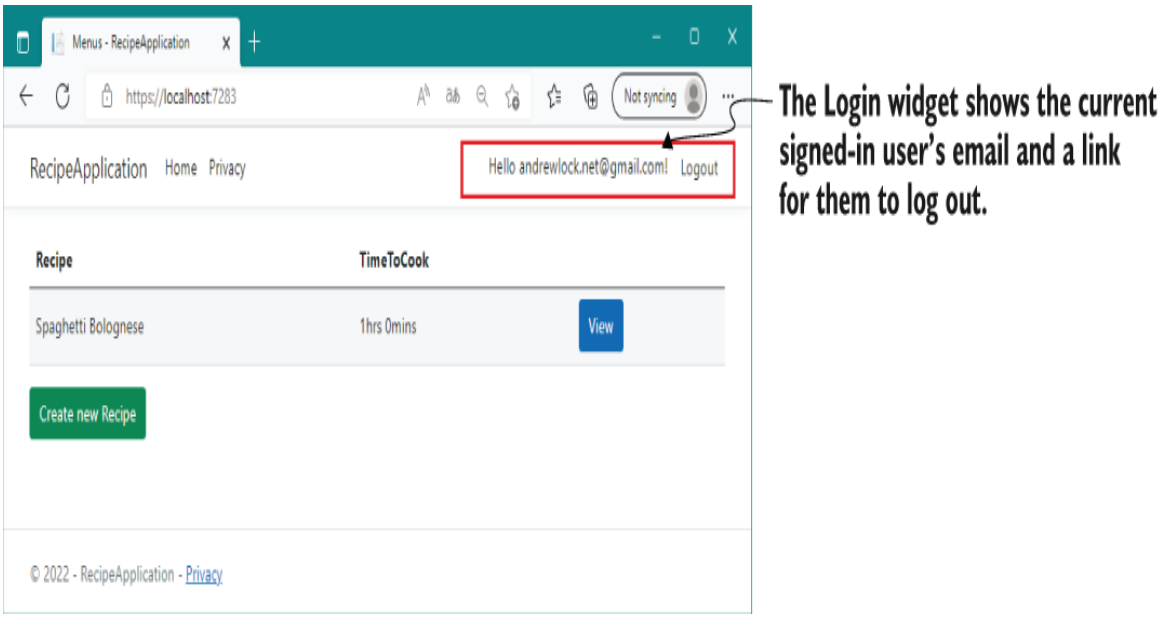

Figure 23.11 The recipe app after adding authentication, showing the Login widget

As in section 23.3, I'm not going to customize any of the defaults at this point, so we won't set up external login providers, email confirmation, or MFA. I'm concerned only with adding ASP.NET Core Identity to an existing app that's already using EF Core.

TIP It's worth making sure you're comfortable with the new project templates before you go about adding Identity to an existing project. Create a test app, and consider setting up an external login provider, configuring an email provider, and enabling MFA. This will take a bit of time, but it'll be invaluable for deciphering errors when you come to adding Identity to existing apps.

To add Identity to your app, you'll need to do the following:
