5. In the **Add Identity** dialog box, select the **Account/Register** page, and select your application's `AppDbContext` as the Data context class, as shown in figure 23.12. Choose **Add** to scaffold the page.

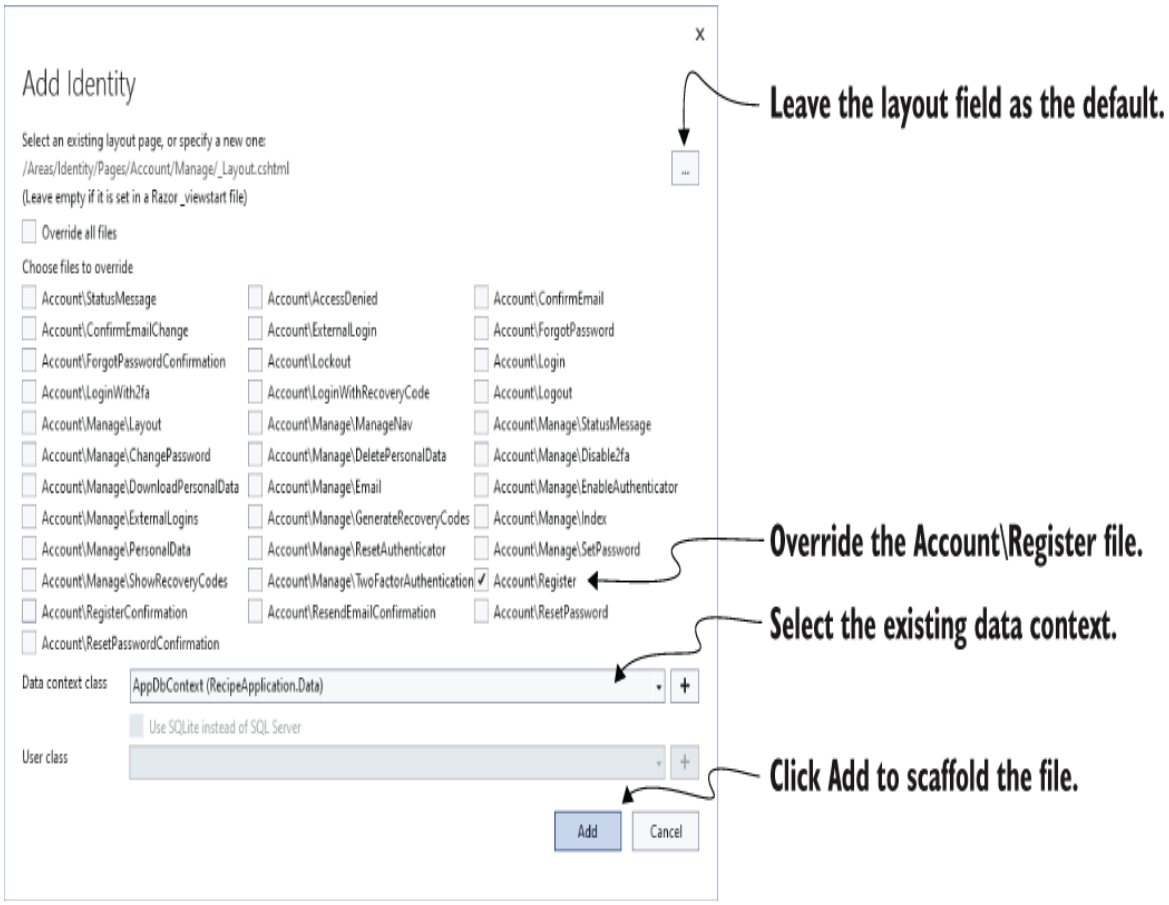

Figure 23.12 Using Visual Studio to scaffold Identity pages. The generated Razor Pages will override the versions provided by the default UI.

TIP To scaffold the registration page using the .NET CLI, install the required tools and packages as described in Microsoft's "Scaffold Identity in ASP.NET Core projects" documentation: http://mng.bz/QPRv. Then run `dotnet aspnet-codegenerator identity -dc RecipeApplication.Data.AppDbContext --files "Account.Register"`.
