- You can update an EF Core `DbContext` to support Identity by deriving from `IdentityDbContext<TUser>`, where `TUser` is a class that derives from `IdentityUser`.
- You can add additional claims to a user using the `UserManager<TUser> .AddClaimAsync(TUser user, Claim claim)` method. These claims are added to the `HttpContext.User` object when the user logs in to your app.
- Claims consist of a type and a value. Both values are strings. You can use standard values for types exposed on the `ClaimTypes` class, such as `ClaimTypes .GivenName` and `ClaimTypes.FirstName`, or you can use a custom string, such as `"FullName"`.
