prove who you are by providing a passport; you *authenticate* yourself. If you've forgotten your passport, you can't authenticate, and you can't go any further.

Once you've purchased your ticket, you're issued a boarding pass, which says which flight you're on. We'll assume that it also includes a `BoardingPassNumber`. You can think of this number as an additional claim associated with your identity.

DEFINITION A *claim* is a piece of information about a user that consists of a type and an optional value.

The next step is security. The security guards ask you to present your boarding pass for inspection, which they use to check that you have a flight and so are allowed deeper into the airport. This is an authorization process: you must have the required claim (a `BoardingPassNumber`) to proceed.

If you don't have a valid `BoardingPassNumber`, there are two possibilities for what happens next:

- *If you haven't yet purchased a ticket*—You'll be directed back to the check-in desk, where you can authenticate and purchase a ticket. At that point, you can try to enter security again.
- *If you have an invalid ticket*—You won't be allowed through security, and there's nothing else you can do. If, for example, you show up with a boarding pass a week late for your flight, they probably won't let you through. (Ask me how I know!)

Once you're through security, you need to wait for your flight to start boarding, but unfortunately, there aren't any seats free. Typical! Luckily,
