

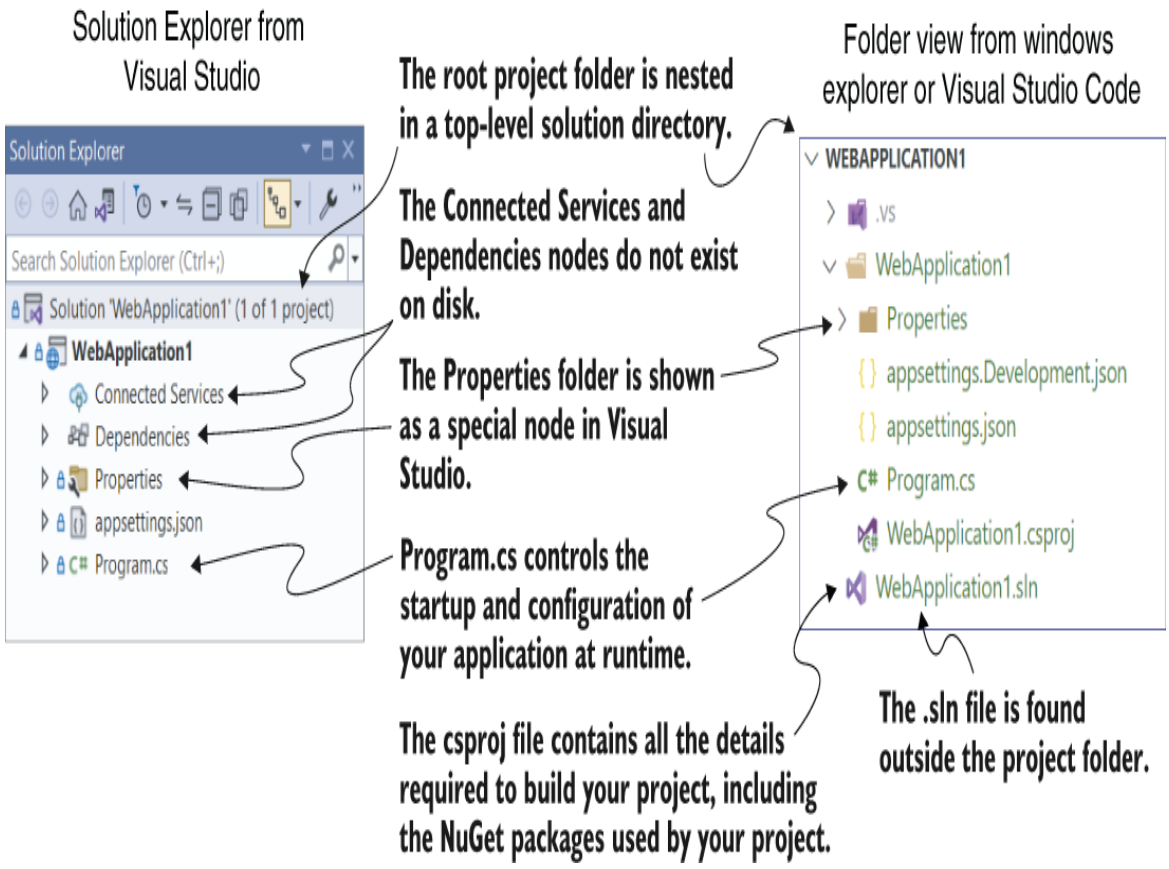

Figure 3.7 Solution Explorer and folder on disk for a new ASP.NET Core application. Solution Explorer also displays the Connected Services and Dependencies nodes, which list NuGet and other dependencies, though the folders themselves don't exist on disk.

The first thing to notice is that the main project, WebApplication1, is nested in a top-level directory with the name of the solution, which is also WebApplication1 in this case. Within this top-level folder you'll also find the solution (.sln) file used by Visual Studio, though this is hidden in Visual Studio's Solution Explorer view.

Inside the solution folder you'll find your project folder, which contains the most important file in your project: WebApplication1.csproj. This file describes how to build your project and lists any additional NuGet packages that it requires. Visual Studio doesn't show the .csproj file explicitly, but you can edit it if you double-click the project name in Solution Explorer or right-click and choose Properties
