

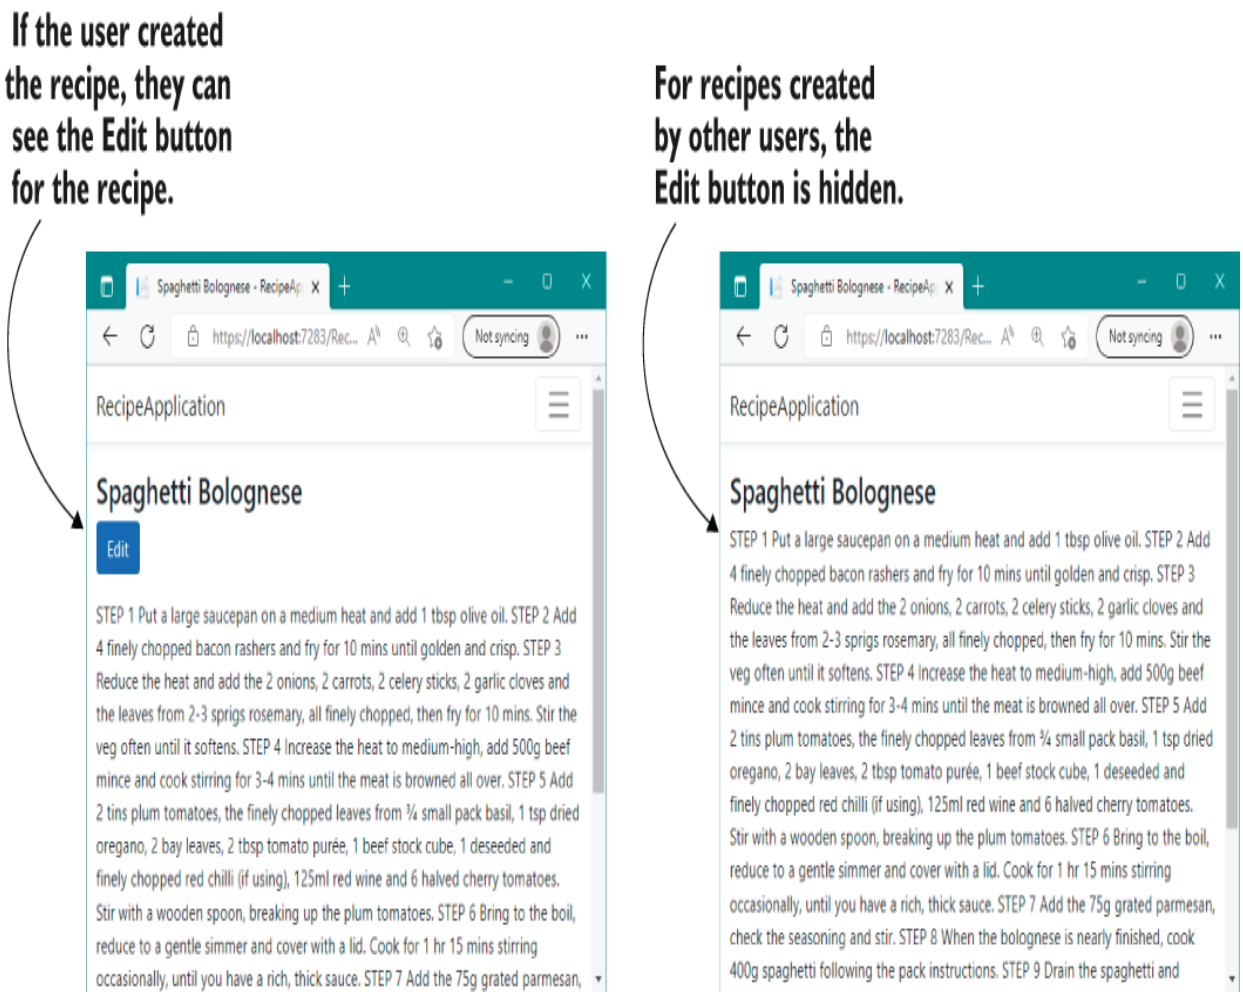

Figure 24.8 Although the HTML will appear unchanged for recipes you created, the Edit button is hidden when you view recipes created by a different user.

Listing 24.16 shows the `PageModel` for the View.cshtml Razor Page, which is used to render the recipe page shown in figure 24.8. As you've already seen for resource-based authorization, you can use the `IAuthorizationService` to determine whether the current user has permission to edit the `Recipe` by calling `AuthorizeAsync`.

You can then set this value as an additional property on the `PageModel`, called `CanEditRecipe`.
