Each part of the JWT is base64-encoded and separated by a '.'.
The JWT signature is calculated from the header, the payload, and signing key material.
Decoded EDIT THE PAYLOAD AND SECRET
HEADER: ALGORITHM & TOKEN TYPE
{
"alg": "HS256",
"typ": "JWT"
}
The header describes the token.
PAYLOAD: DATA
{
"unique_name": "andrewlock.net@gmail.com",
"sub": "andrewlock.net@gmail.com",
"jti": "889a301a",
"website": "https://andrewlock.net",
"aud": [
"http://localhost:5073",
"https://localhost:7112"
],
"scope": ["read", "write"],
"nbf": 1666441619,
"exp": 1674390419,
"iat": 1666441621,
"iss": "dotnet-user-jwts"
}
Custom claim
Standard claims
VERIFY SIGNATURE
