Converting all your responses to Problem Details

Returning other data types

5.4 Running common code with endpoint filters

Adding multiple filters to an endpoint

Filters or middleware: Which should you choose?

Generalizing your endpoint filters

Implementing the IEndpointFilter interface

5.5 Organizing your APIs with route groups

6 Mapping URLs to endpoints using routing

6.1 What is routing?

6.2 Endpoint routing in ASP.NET Core

6.3 Exploring the route template syntax

Working with parameters and literal segments

Using optional and default values

Adding additional constraints to route parameters

Matching arbitrary URLs with the catch-all parameter

6.4 Generating URLs from route parameters

Generating URLs for a minimal API endpoint with LinkGenerator

Generating URLs with IResults

Controlling your generated URLs with RouteOptions

7 Model binding and validation in minimal APIs

7.1 Extracting values from a request with model binding

7.2 Binding simple types to a request

7.3 Binding complex types to the JSON body

7.4 Arrays: Simple types or complex types?

7.5 Making parameters optional with nullables

7.6 Binding services and special types

Injecting well-known types

Injecting services
