among; you can also use third-party components from NuGet and GitHub, or you can build your own custom middleware. You can find the list of built-in middleware at http://mng.bz/Gyxq.

NOTE I discuss building custom middleware in chapter 31.

In this section, you'll see how to create one of the simplest middleware pipelines, consisting only of `WelcomePageMiddleware`. `WelcomePageMiddleware` is designed to provide a sample HTML page quickly when you're first developing an application, as you can see in figure 4.4. You wouldn't use it in a production app, as you can't customize the output, but it's a single, self-contained middleware component you can use to ensure that your application is running correctly.
