*Binding file uploads with IFormFile and IFormFileCollection*

7.7 Custom binding with BindAsync

7.8 Choosing a binding source

7.9 Simplifying handlers with AsParameters

7.10 Handling user input with model validation

*The need for validation*

*Using DataAnnotations attributes for validation*

*Adding a validation filter to your minimal APIs*

# Part 2 Building complete applications

## *8 An introduction to dependency injection*

8.1 Understanding the benefits of dependency injection

8.2 Creating loosely coupled code

8.3 Using dependency injection in ASP.NET Core

8.4 Adding ASP.NET Core framework services to the container

8.5 Using services from the DI container

## *9 Registering services with dependency injection*

9.1 Registering custom services with the DI container

9.2 Registering services using objects and lambdas

9.3 Registering a service in the container multiple times

*Injecting multiple implementations of an interface*

*Injecting a single implementation when multiple services are registered*

*Conditionally registering services using TryAdd*

9.4 Understanding lifetimes: When are services created?

*Transient: Everyone is unique*

*Scoped: Let's stick together*

*Singleton: There can be only one*

*Keeping an eye out for captive dependencies*
