

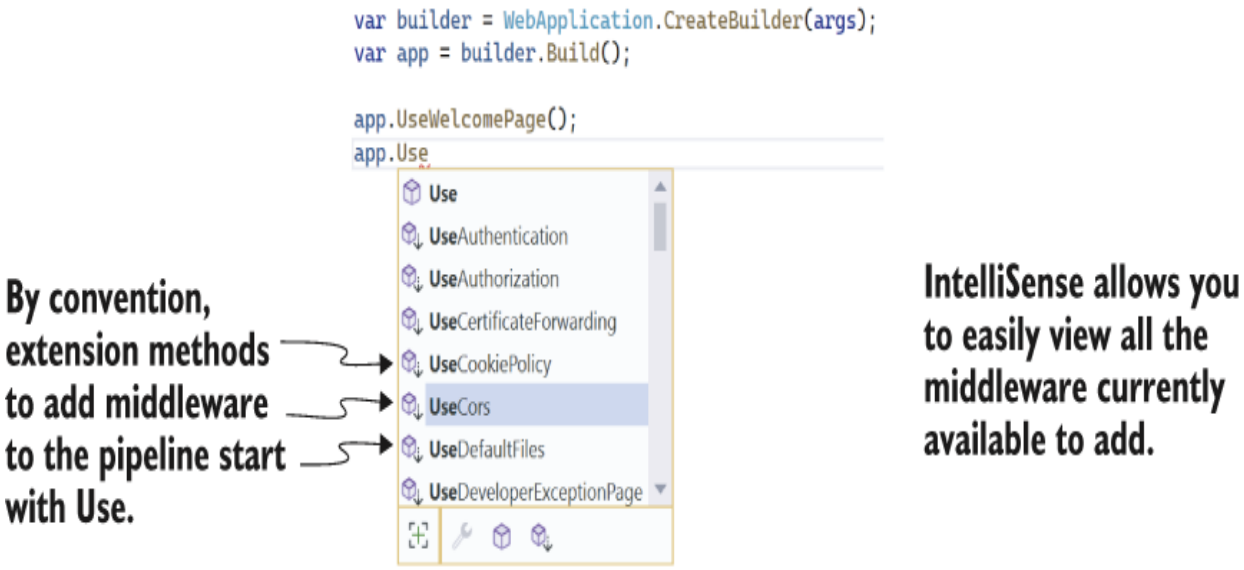

Figure 4.6 IntelliSense makes it easy to view all the available middleware to add to your middleware pipeline.

Calling the `UseWelcomePage` method adds the `WelcomePageMiddleware` as the next middleware in the pipeline. Although you're using only a single middleware component here, it's important to remember that the order in which you make calls to `IApplicationBuilder` in `Configure` defines the order in which the middleware will run in the pipeline.

WARNING When you're adding middleware to the pipeline, always take care to consider the order in which it will run. A component can access only data created by middleware that comes before it in the pipeline.

This application is the most basic kind, returning the same response no matter which URL you navigate to, but it shows how easy it is to define your application behavior with middleware. Next, we'll make things a little more interesting by returning different responses when you make requests to different paths.
