

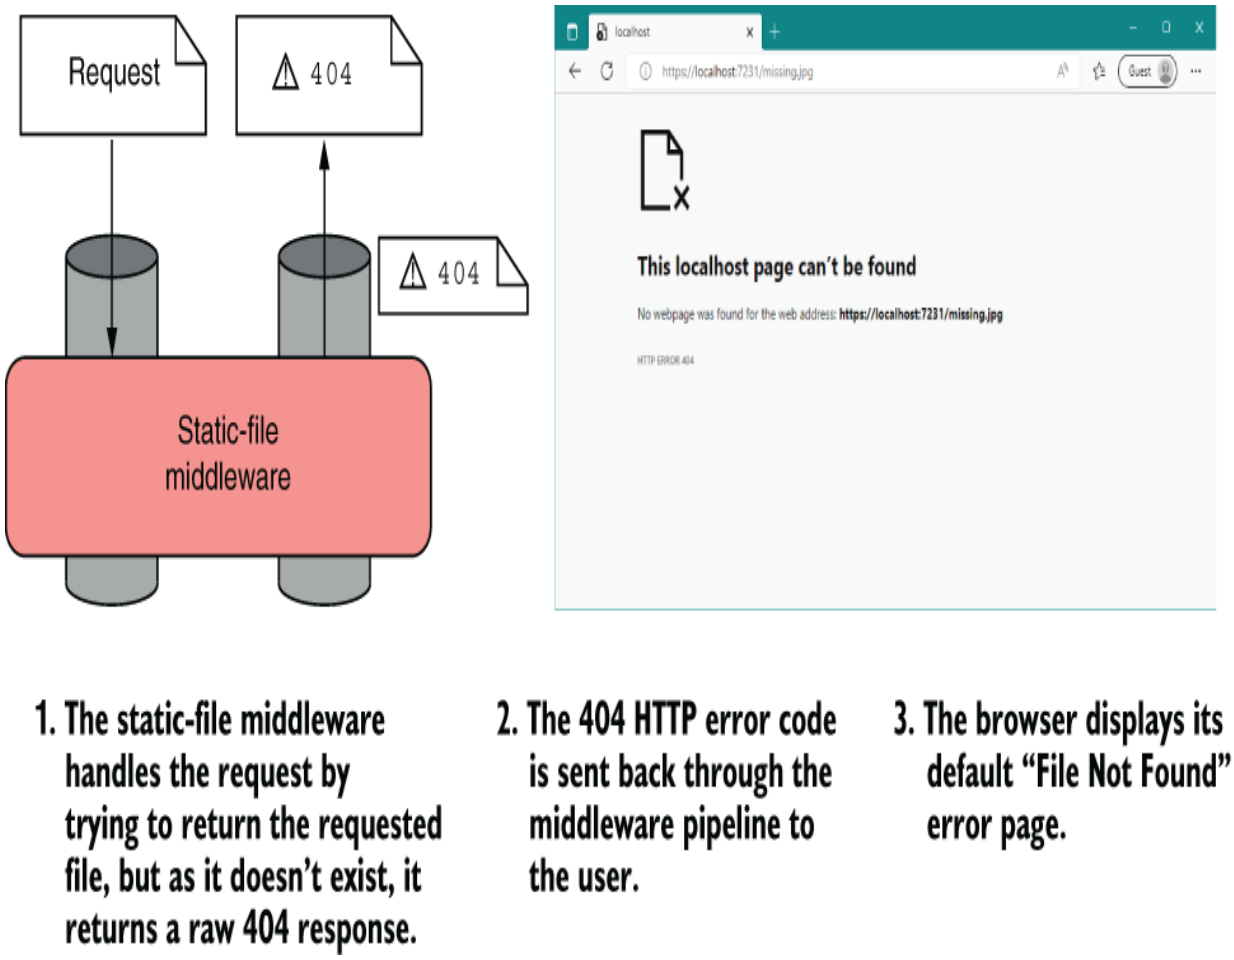

Figure 4.8 Returning a 404 to the browser when a file doesn't exist. The requested file didn't exist in the wwwroot folder, so the ASP.NET Core application returned a 404 response. Then the browser (Microsoft Edge, in this case) shows the user a default "File Not Found" error page.

Building the middleware pipeline for this simple static-file application is easy. The pipeline consists of a single piece of middleware, `StaticFileMiddleware`, as you can see in the following listing. You don't need any services, so configuring the middleware pipeline with `UseStaticFiles` is all that's required.

Listing 4.2 Program.cs for a static-file middleware pipeline
