Nevertheless, in some cases it may pay to know exactly what's in your pipeline, especially if you're familiar with ASP.NET Core. In .NET 7, `WebApplication` automatically adds some or all of the following middleware to the start of the middleware pipeline:

- `HostFilteringMiddleware`—This middleware is security-related. You can read more about why it's useful and how to configure it at http://mng.bz/zXxa.
- `ForwardedHeadersMiddleware`—This middleware controls how forwarded headers are handled. You can read more about it in chapter 27.
- `DeveloperExceptionPageMiddleware`—As already discussed, this middleware is added when you run in a development environment.
- `RoutingMiddleware`—If you add any endpoints to your application, `UseRouting()` runs before you add any custom middleware to your application.
- `AuthenticationMiddleware`—If you configure authentication, this middleware authenticates a user for the request. Chapter 23 discusses authentication in detail.
- `AuthorizationMiddleware`—The authorization middleware runs after authentication and determines whether a user is permitted to execute an endpoint. If the user doesn't have permission, the request is short-circuited. I discuss authorization in detail in chapter 24.
- `EndpointMiddleware`—This middleware pairs with the `RoutingMiddleware` to *execute* an endpoint. Unlike the other middleware described here, the `EndpointMiddleware` is added to the *end* of the middleware pipeline, after any other middleware you configure in Program.cs.

Depending on your Program.cs configuration, `WebApplication` may not add all this middleware. Also, if you don't want some of this automatic middleware to be at the start of your middleware pipeline, generally you can override the location. In listing 4.3, for example, we override the automatic `RoutingMiddleware` location by calling `UseRouting()` explicitly, ensuring that routing occurs exactly where we need it.

Another important point about listing 4.3 is that the order in which you add the middleware to the `WebApplication` object is the order in which
