

Conventions for project structures have emerged in the ASP.NET Core framework libraries and open-source projects on GitHub. You don't have to follow them for your own project, but it's worth being aware of them.

All these conventions are optional. Whether to follow them is entirely up to you. Either way, it's good to be aware of them so you can easily navigate other projects on GitHub.

Your test project is now referencing your web project, so you can write tests for classes in the web project. You're going to be testing a simple class used for converting among currencies, as shown in the following listing.
