the middleware is added to the pipeline. The order of the calls in listing 4.3 creates a pipeline similar to that shown in figure 4.11.

The developer exception page middleware was added first, so it is the first (and last) middleware to process the request.

The static-file middleware is the second middleware in the pipeline. It handles requests for static files before they get to the endpoint middleware.

The routing middleware attempts to find an endpoint that will handle the request.

The endpoint middleware is the last in the pipeline. If there is no endpoint to handle the request, the pipeline returns a 404 response.
