.csproj project file 41 – 43
configuration for multiple environments 238 – 246
identifying hosting environment 239 – 240
loading environment-specific configuration files 240 – 242
setting hosting environment 243 – 246
configuration model 216 – 218
configuration objects 218 – 230
adding configuration providers in Program.cs 221 – 223
overriding configuration values using multiple providers 223 – 225
reloading configuration values 229 – 230
storing configuration secrets 225 – 229
converting existing ASP.NET applications to 27 – 29
creating 33 – 37
dependency injection 173 – 189
functionality 46 – 52
adding and configuring services 48 – 50
defining request handling with middleware and endpoints 50 – 52
JSON APIs 84 – 117
mapping URLs to endpoints using routing 118 – 140
overview of 31 – 33
Program.cs file 43 – 46
project layout 40 – 41
request handling with middleware 55 – 83
running 39 – 40
strongly typed settings with options pattern 230 – 238
binding strongly typed settings 237 – 238
designing options classes for automatic binding 235 – 237
IOptions 232 – 234
IOptionsSnapshot 234 – 235
templates 34 – 37
aspnet-client-validation 449
ASPNETCORE_ENVIRONMENT environment variable 239, 243, 703 – 704
ASPNETCORE_FORWARDEDHEADERS_ENABLED 722
ASPNETCORE_HTTPS_PORT environment variable 721
ASPNETCORE_URLS environment variable 684, 703 – 704, 714
Assert call 882
Assert class 885
Assert.Equal() 882
Assert.Throws method 885
AsSpan() 148
async methods 301, 760, 807
attribute 145 – 146, 152, 157, 161, 379 – 381, 383, 392, 403
attribute routing 342, 497 – 502
combining route attributes 499 – 500
handling HTTP verbs with 501 – 502
using token replacement to reduce duplication 500 – 501
attributes, adding metadata to endpoints using 271 – 272
authentication 559 – 589, 623 – 653
applying authorization policies to minimal API endpoints 648 – 651
ASP.NET Core Identity
