adding custom data to users 586 – 588
adding to existing projects 578 – 583
creating projects 568 – 578
customizing pages in default UI 583 – 586
overview of 566 – 568
bearer token authentication
adding to minimal APIs 637 – 640
overview of 632 – 637
defined 536, 560 – 561
describing requirements to OpenAPI 645 – 648
for APIs and distributed apps 624 – 631
centralizing authentication in identity providers 626 – 629
extending authentication to multiple apps 624 – 626
OIDC and OAuth 2.0 629 – 631
JSON Web Tokens
adding bearer token authentication to minimal APIs 637 – 640
user-jwts tool 640 – 644
services and middleware 562 – 566
authenticating users for subsequent requests 564 – 566
signing in to ASP.NET Core application 562 – 564
users and claims 561 – 562
authentication handler 639
authentication scheme 639
authorization 590 – 622
claims-based authorization policies 600 – 603
creating custom policies 603 – 611
custom requirements and handlers 606 – 611
requirements and handlers 604 – 605
defined 536, 560 – 561
hiding HTML elements from unauthorized users 618 – 620
in ASP.NET Core 594 – 600
handling unauthorized requests 598 – 600
preventing anonymous users from accessing apps 596 – 598
overview of 591 – 594
resource-based authorization 611 – 616
creating resource-based handlers 615 – 616
manually authorizing requests 613 – 615
authorization filters 535 – 536
Authorization header 636, 639, 642, 646 – 647
authorization protocol 629
AuthorizationBuilder object 602
AuthorizationHandler
creating resource-based 615 – 616
custom handlers 606 – 611
overview of 604 – 605
AuthorizationPolicyBuilder type 603
AuthorizationResult object 614
AuthorizeAsync method 614
