background tasks and services 846 – 871
coordinating using Quartz.NET 861 – 870
configuring jobs to run on schedule 864 – 867
installing in ASP.NET Core apps 862 – 864
using clustering to add redundancy 867 – 870
creating headless worker services using IHost 854 – 861
from templates 856 – 858
running in production 859 – 861
running with IHostedService 847 – 854
running background tasks on timer 848 – 852
using scoped services in background tasks 852 – 854
BackgroundService 847, 849, 856, 862
Baier, Dominick 921
BaseAddress property 265
BaseController class 501
baseUrl parameter 265
Bearer <token> 642
bearer token authentication
adding to minimal APIs 637 – 640
overview of 632 – 637
BeginRequest event 60
BeginScope call 680
BFF (Backend for Frontend) pattern 633
BindAsync 159 – 160
BindConfiguration() method 790
binders 232
binding models 376 – 404
building 332 – 333
in Razor Pages and MVC 377 – 380
organizing 401 – 404
requests 380 – 393
binding complex types 388 – 391
binding simple types 384 – 387
choosing binding source 391 – 393
validating 393 – 400
in Razor Pages 394 – 396
on client for user experience 399 – 400
on server for safety 396 – 399
binding sources 379 – 381, 382, 383, 389, 403
Blazor components 808
Blazor in Action (Sainty) 21, 85, 88, 395, 484, 808, 919
Boden, Damien 922
bool data type 146, 232, 450
bool IsComplete property 418
branch builder 776
Brind, Mike 412, 922
brittle tests 900
Building Web APIs with ASP.NET Core (De Sanctis) 87, 484
Buna, Samer 827
byte data type 450
