configuration objects 218 – 230
adding configuration providers in Program.cs 221 – 223
overriding configuration values using multiple providers 223 – 225
reloading configuration values 229 – 230
storing configuration secrets 225 – 229
Configuration property 221
configuration providers 218
configuration secret storage 225 – 229
in environment variables in production 226 – 227
with User Secrets manager in development 227 – 229
ConfigurationManager 218, 221
Configure() method 237, 758, 760 – 761, 764, 789 – 790, 897
Configure<T>() method 137, 788
Configure<T>extension instance 233
Configure<T>extension objects 233
Configure<TDeps> methods 792
ConfigureAppConfiguration() method 763 – 764
ConfigureCurrencyOptions class 793
ConfigureHostingConfiguration() method 763
ConfigureLogging() method 764
Configuremethods 791
ConfigureServices method 758, 766, 772, 816, 857, 904
ConfigureWebHostDefaults helper method 756
ConnectionStrings__ DefaultConnection environment variable 226
conneg (content negotiation) 511
constraints for routes 130
Contact method 497
containers
adding ASP.NET Core framework services to 184 – 186
defined 699
registering services
in containers multiple times 199 – 202
with DI containers 191 – 195
third-party DI containers 793 – 796
using services from DI containers 186 – 188
content delivery network (CDN) 449
content management systems (CMSs) 19
content negotiation (conneg) 509 – 511
Content-Security-Policy (CSP) 716 – 717, 728
Content-Type header 506, 774
Content() helper method 811
ContentRootPath property 239
context object 538
context parameter 542
context.Fail() method 609
context.GetArgument() function 106
context.Result property 538, 549
continuous delivery/deployment (CD) 690
continuous integration (CI) 690
Controller base class 349, 476, 490
